API for Clearview services

API Authentication

Authentication is done via API Key, passing it as a Bearer Token on every request.

```
Authorization: Bearer <your_api_key>
```

Pagination

A common pagination interface abstracts details away so that it's uniform across almost all resources. You can tell based on the shape of the response.

```
# Example API response for GET /api/v1/users?organization_id={your_organization_id
{
  "api_version": "1",
  "id": "9528cacb-dc3e-4d5a-9c27-372006116061",
  "data": {
    "items": [<some users>],
    "next_page_token": "eyJvIjogMTAsICJzayI6ICJsYXN0X3NlYXJjaF90cyIsICJzbyI6ICJkZX
    "total_items": 4497
```

```
  }
}
```

Notice the `items`, `next_page_token`, and `total_items`.

`next_page_token` will be null when there are no more pages. It will be not-null if there are more results. Passing this as `page_token` for the next request gets the next page. Changing the query invalidates usage of that token. In other words, you cannot re-use `page_token` across other queries. It's specific to what you are querying, and works only for the next page of the very same query.

Example: Get the next page of your organization's users, sorted by their name, in ascending order, with a max page size of 5.

```
curl --request GET \
--url 'http://app.clearview.ai/api/v1/users?sort_by=name&sort_order=ascending&page
--header 'Authorization: Bearer {your_api_key}'
```

Notice that the parameter for page size is not page_size, it is `max_page_size`. That's because there is no guarantee how many items will return in the next request. It will be between 0 and `max_page_size`. You simply must keep passing `next_page_token` as `page_token` in subsequent requests until `next_page_token` is null in the response, and that's how you know you're done. `total_items` can be used to roughly appromixate pages, but shouldn't necessarily be relied on for this reason.

Filtering and Sorting

Not all collections can be filtered and sorted equally.

All paginated collections offer `sort_by` (what field to sort the objects by; default: `"ts"`) and `sort_order` (`"ascending"` or `"descending"`). And some collections are sortable based on timestamps: `after_ts` (unix timestamp), `before_ts` (unix timestamp). For filtering searches, see the respective documentation for searches below.

authentication

Read the current authentication status and permissions for the logged-in user.

This endpoint is used to check if the user has a valid session. When called with an API key, it always returns a 200 response, with the User and Company objects for the user who owns the API key.

searches

Search faces from an image or URL and find matches in Clearview's database.

Overview

Clearview allows you to search using a url, file (photo), Search History Item id (reference to a previous search, retriggering it), face id, video import face id, or a vector representation of the face. On a successful search, a summary of the search is returned including basic metadata, a list of results, and the generated Search History item (`search_history_item`).

All of these have slightly different workflows, which we will examine in detail below.

Upload photo, get faces, and search with them

1. Upload a photo using the `/search_uploads` endpoint (see search uploads). The response from the search_uploads endpoint will include a `blob_id` for the photo and a `face_id` for each face detected in the photo, together with the bounding box of the face.

2. Make a search (application/json) with the `face_id` and `blob_id` that you have selected, with `type: face_id` and `face_type: upload`:

`application/json`:

```
{
  "input": {
      "items": [
          {
              "type": "face_id",
              "face_id": "95b9a060-6545-473c-bc08-f00e472e2b75",
              "blob_id": "5c0a9f96-c4be-4958-9933-62547ed90cc8",
              "face_type": "upload",
          }
      ]
  }
}
```

Note: Though "items" can only contain one item at the moment, it's a list for future compatibility.

Upload a file, automatically searching the largest face in the image

If you upload a file with a `multipart/form-data` content type, Clearview will automatically search the largest face in the image.

`multipart/form-data`:

```
{
  "file": "somefile.jpg"
}
```

Upload a URL, automatically searching the largest face in the image

If you upload a URL, Clearview will automatically search the largest face in the image.

`application/json`:

```
{
  "input": {
    "items": [
      {
        "type": "url",
        "url": "https://example.com/photo.jpg"
      }
    ]
  }
}
```

Search using a Search History Item id

If you have previously performed a search, you can use the `search_history_id` key to retrigger it and get an updated result set.

`application/json`:

```
{
  "input": {
    "items": [
      {
        "type": "search_history_id",
        "search_history_id": "123e4567-e89b-12d3-a456-426614174000"
      }
    ]
  }
}
```

REQUEST BODY SCHEMA: application/json

`input >`
required

object
What items to create a search query by.

`metadata >`

object
Metadata which can be associated with the search.

`sources >`

object non-empty

Examples:

"sources": { "main_index": true, "galleries": true, "collections": true }

"sources": { "main_index": true, "galleries": { "include_ids": ["gallery_id_1", "gallery_id_2"] }, }

"sources": { "main_index": true, "galleries": { "exclude_ids": ["gallery_id_1", "gallery_id_2"] }, }

"sources": { "main_index": { "include_types": [4, 5, 6], "exclude_domains": ["arrests.org"], }, "galleries": false, }

"sources": { "main_index": false "collections": true, },

"sources": { "collections": { "include_ids": ["collection_id_1", "collection_id_2"] } }

"sources": { ... "search_connections": { include_ids: ["search_connection_id_1"] exclude_ids: ["search_connection_id_2"] } }

`options >`

object
Additional options to modify how the search is performed.

---

secure_searches

Search faces within an item against the database without creating a search history item.

Overview

The secure search endpoint is similar to the search endpoint, but it does not create a search history item. This may be useful to organizations that do not want their probes or results to be recorded within the Clearview system. You may refer to the search endpoint for more details.

No search history item or search result record is created when using this endpoint. However, if you pass a `custom_log_id` parameter, you can use it to create a record of this secure search, which can later be fetched using the `custom_log_id` parameter to the GET request. Note that the data which is retained in this case is limited to basic metadata about the time of the search and the number of results.

REQUEST BODY SCHEMA: multipart/form-data

`type` required	string Value: `"file"`
`face_type` required	string Enum: `"upload"` `"camera"` `"checkin"` `"main_index"` `"gallery"` `"collection"` The sort of blob from which the face was extracted. For user-supplied files, this is always "upload".
`file`	string <binary>
`search_mode`	string Default: `"fast"` Enum: `"fast"` `"exhaustive"` The mode of the search. "fast" is the default and will return faster, but may not return as many results as "exhaustive".
`custom_log_id`	string

Responses

Get information about a previous Secure Search by its `custom_log_id`.

QUERY PARAMETERS

`custom_log_id` required	string It is only possible to query this if you previously passed `custom_log_id` when you created the Secure Search.
`organization_id`	string <uuidv4> The organization id for the organization that owns the requested resources. This should almost always be the calling user's organization
`before_ts`	integer If present, filter to items before the given unix timestamp.
`after_ts`	integer If present, filter to items after the given unix timestamp.
`page_token`	string

Token that represents which page you are currently on. None = 1st page. Each page will return a new token, used for retrieving the next page.

`max_page_size`

integer `>= 0`
Default: `10`
How many items to page by. The server can choose to return less than this per page.

`sort_by`

string
Default: `"ts"`
What field to sort by (defaults to 'ts' (timestamp)).

`sort_order`

string
Default: `"descending"`
Enum: `"ascending"` `"descending"`
How to sort ("ascending" or "descending").

Responses

> **200** A paged list of secure_search records matching the provided parameters.

---

search_results

Get a list of search results.

QUERY PARAMETERS

`organization_id`	string <uuidv4> The organization id for the organization that owns the requested resources. This should almost always be the calling user's organization

`user_group_id`	string <uuidv4> The id of the user group whose members own the requested resources. If this is present, only items owned by members of the specified user group will be returned.
`user_id`	string <uuidv4> The id of the user who owns the requested resources. If this is present, only items owned by the specified user will be returned.
`search_history_id`	string <uuidv4> The search history uuid.v4 id

---

search_history

Get all Search History items.

QUERY PARAMETERS

`ids`	Array of strings <uuidv4_list> A list of item uuids. If provided, only those items can be returned.

`creator_id`

string <uuidv4>

The id of the user who created the requested resources. If this is present, only items created by the specified user will be returned.

`organization_id`

string <uuidv4>

The organization id for the organization that owns the requested resources. This should almost always be the calling user's organization

---

`user_group_id`

string <uuidv4>

The id of the user group whose members own the requested resources. If this is present, only items owned by members of the specified user group will be returned.

`user_id`

string <uuidv4>

The id of the user who owns the requested resources. If this is present, only items owned by the specified user will be returned.

`investigation_id`

string <uuidv4>

`saved`

boolean

`hidden`

string

Default: `"false"`

Enum: `"true"` `"false"` `"any"`

Determines whether to return hidden items; defaults to "false", meaning that hidden items are excluded. Can be set to "true" to only show hidden items, or "any" to show both hidden and non-hidden items.

`search_origin`

string

Enum: `"face_search"` `"compliance"` `"cvfield"`

`guest_shared_searches`

boolean

Filter by items with guest sharing

`has_deconfliction_match`

boolean

Filter by items that have a deconfliction match

`before_ts`

integer

If present, filter to items before the given unix timestamp.

`after_ts`

integer

If present, filter to items after the given unix timestamp.

`page_token`

string

Token that represents which page you are currently on. None = 1st page. Each page will return a new token, used for retrieving the next

page.

`max_page_size`

integer `>= 0`
Default: `10`
How many items to page by. The server can choose to return less than this per page.

`sort_by`

string
Default: `"ts"`
What field to sort by (defaults to 'ts' (timestamp)).

`sort_order`

string
Default: `"descending"`
Enum: `"ascending"` `"descending"`
How to sort ("ascending" or "descending").

Responses

200 A paged list of previous search history items matching the provided parameters.

Update a Search History item.

PATH PARAMETERS

`search_history_id` required	string <uuidv4> The Search History item uuid.v4 id.

REQUEST BODY SCHEMA: application/json

`hidden`	boolean
`search_name`	string or null
`search_success`	boolean
`alerts`	boolean
`guest_share` >	string or boolean Set guest_share to an email to add a share with that user. Updating with guest_share=false will revoke all existing shares.
`guest_name`	string Optionally set the name to go with the email of an external guest.
`guest_share_revoke`	string <email> Revoke the share to a particular guest user, identified by email.
`send_email_to_guest`	boolean Whether to send email to guest or not. Guests receive emails when being sent results directly, but not when PDFs are exported on their behalf.
`quality_review_sent`	boolean This will mark the probe as Sent for Quality Review

`deconfliction_enabled` boolean

Whether to enable deconfliction for this search.

search_uploads

Create a new search upload.

Create a new search upload using a blob in multipart upload form.

REQUEST BODY SCHEMA: multipart/form-data

`file`	string <binary>
`url`	string <url> Image URL
`search_name`	string or null
`fqa`	string Enum: `"true"` `"false"` Whether to calculate the FQA score for this upload, as a string "true" or "false"
`lat` >	string or number Latitude at which this upload was taken.
`lng` >	string or number Longitude at which this upload was taken.
`investigation_id`	string <uuidv4> The id of the investigation that this upload belongs to

Get search uploads

QUERY PARAMETERS

`upload_blob_ids`	Array of strings <uuidv4> Blob Ids in uuidv4 format
`user_id`	string <uuidv4> The id of the user who owns the requested resources. If this is present, only items owned by the specified user will be returned.
`investigation_id`	string <uuidv4>
`page_token`	string Token that represents which page you are currently on. None = 1st page. Each page will return a new token, used for retrieving the next page.
`max_page_size`	integer `>= 0` Default: `10` How many items to page by. The server can choose to return less than this per page.
`sort_by`	string Default: `"ts"` What field to sort by (defaults to 'ts' (timestamp)).
`sort_order`	string Default: `"descending"` Enum: `"ascending"` `"descending"` How to sort ("ascending" or "descending").

Responses

> **200** A paged list of upload blobs.

Delete a search upload by blob_id.

Delete a search upload by blob_id. Note that a search upload cannot be deleted if it has been used in a search, so this is a way to eliminate accidental uploads, not to remove data related to old searches.

PATH PARAMETERS

`blob_id` required	string <user_uuidv4> The blob uuid.v4 id.

Responses

— **400** Malformed request, most likely a validation error.

— **401** The requester doesn't have permission to perform this action.

— **403** The request is unauthenticated.

— **404** The specified resource doesn't exist.

— **500** The server encountered an unexpected condition that prevented it from fulfilling the request.

DELETE `/api/v1/search_uploads/{blob_id}`

Upload multiple files at once.

Upload multiple files at once for face detection and search, to be processed in a background job.

REQUEST BODY SCHEMA: multipart/form-data

`investigation_id` required	string <uuidv4>
`files`	Array of strings <binary>
`urls`	string

Image URL A, Image URL B, ...

---

investigations

Create an investigation for the current user.

Creates an investigation for the current user. Creating an investigation with a full enrollment form is currently not documented for API users. The easiest way to create a usable investigation is to provide a value for the `category` field documented below, which is a free text field that can be referenced by the `category` field in the created investigation.

REQUEST BODY SCHEMA: application/json

`configurable_enrollment` > object

`category`	string The category of the investigation (recommended for API users). This is optional and supplimentary to the actual enrollment form, and is not controlled by the enrollment schema.
`owner_id`	string <uuidv4> The proxy id for the owner of the investigation. This may be the owner proxy id for the user themself, or any user group that the user belongs to. If this is not provided, the owner of the investigation will be the current user.

Responses

> **201** The created investigation object.

            "updated_ts": 0
        }
    }
}
```

Get a set of investigations.

QUERY PARAMETERS

`creator_id`	string <uuidv4> The id of the user who created the requested resources. If this is present, only items created by the specified user will be returned.

`organization_id`
string <uuidv4>
The organization id for the organization that owns the requested resources. This should almost always be the calling user's organization

`user_group_id`
string <uuidv4>
The id of the user group whose members own the requested resources. If this is present, only items owned by members of the specified user group will be returned.

`user_id`
string <uuidv4>
The id of the user who owns the requested resources. If this is present, only items owned by the specified user will be returned.

`owner_id`
string <uuidv4>
The id of the owner of the requested resources. This may be the owner_proxy_id of a user, user_group, or organization, and it will only return items explicitly owned by that object (excluding things owned by group and organization members).

`in_progress`
boolean
If present, limit investigations by their current status

`investigation_success`
boolean
If present, limit investigations by their success outcome

`enrollment_complete`
boolean
If present, limit investigations by whether or not their probe enrollment form is complete.

`keyword`
string
keyword search term to filter

`before_ts`
integer
If present, filter to items before the given unix timestamp.

`after_ts`
integer
If present, filter to items after the given unix timestamp.

`sort_by`
string
Default: `"ts"`
What field to sort by (defaults to 'ts' (timestamp)).

Responses

200 A paged list of investigations.

Close the investigation.

This is a synonym for patching the investigation with `in_progress=False`. A closed investigation is presented in the web application as "archived".

PATH PARAMETERS

`investigation_id`	string <uuidv4>

required

The investigation uuid.v4 id.

Responses

— **400** Malformed request, most likely a validation error.

— **401** The requester doesn't have permission to perform this action.

— **403** The request is unauthenticated.

— **404** The specified resource doesn't exist.

— **500** The server encountered an unexpected condition that prevented it from fulfilling the request.

DELETE /api/v1/investigations/{investigation_id}

Update an investigation

Update the values of an investigation.

PATH PARAMETERS

`investigation_id`
required

string <uuidv4>
The id for the investigation whose values to update.

REQUEST BODY SCHEMA: application/json

`in_progress`

boolean
Whether the investigation is currently in progress. Investigations with in_progress=False are presented in the UI as "archived".

`category`

string
The category of the investigation. This is optional and supplimentary to the actual enrollment form, and is not controlled by the enrollment

	schema.
`investigation_success`	boolean Whether the investigation was successful.
`comments`	string Additional comments about the investigation.
`pinned`	boolean Whether the investigation is pinned. Pinned investigations are presented at the top of the investigation list in the UI.
`policies` >	Array of objects
`configurable_enrollment` >	object The configurable probe enrollment values to associate with this investigation. Note that if this key is included, it entirely replaces the existing probe enrollment for the form rather than merely updating the values provided.
`owner_id`	string <uuidv4> The proxy id for the owner of the investigation. This may be the owner proxy id for the user themself, or any user group that the user belongs to.

Responses

> **200** The updated investigation object.

            }
        ]
    }
}
```

Get all galleries.

QUERY PARAMETERS

`name`	string Exact gallery name.

`source`

string
Enum: `"manual"` `"imported"` `"agent"`
The source of the gallery, i.e 'manual', 'imported', or 'agent'.

`organization_id`

string <uuidv4>
The organization id for the organization that owns the requested resources. This should almost always be the calling user's organization

`page_token`

string
Token that represents which page you are currently on. None = 1st page. Each page will return a new token, used for retrieving the next page.

`max_page_size`

integer `>= 0`
Default: `10`
How many items to page by. The server can choose to return less than this per page.

`sort_by`

string
Default: `"ts"`
What field to sort by (defaults to 'ts' (timestamp)).

`sort_order`

string
Default: `"descending"`
Enum: `"ascending"` `"descending"`
How to sort ("ascending" or "descending").

Responses

          }
      ]
  }
}
```

Get all gallery items within the specified gallery.

QUERY PARAMETERS

`gallery_id`

string <uuidv4>

The gallery uuid.v4 id. This returns all items found in the given gallery.

`tag_id`

string <uuidv4>

The uuid.v4 id for a tag. This returns all items tagged with this tag across all galleries owned by the current user's organization.

`page_token`

string

Token that represents which page you are currently on. None = 1st page. Each page will return a new token, used for retrieving the next page.

`max_page_size`

integer `>= 0`

Default: `10`

How many items to page by. The server can choose to return less than this per page.

`sort_by`

string

Default: `"ts"`

What field to sort by (defaults to 'ts' (timestamp)).

`sort_order`

string

Default: `"descending"`

Enum: `"ascending"` `"descending"`

How to sort ("ascending" or "descending").

Responses

> **200** A paged list of gallery items.

Create a number of new gallery items at the same time

REQUEST BODY SCHEMA: multipart/form-data

`gallery_id` required	string The uuid4 of the gallery to which these items are added
`files`	Array of strings <binary> The array of photographs to add to the gallery
`data[]`	Array of strings <json> An array of json strings containing the values to associate with the images. The length of the data array must be the same as the length of the files array, and the data in this array is associated one-to-one with the file array, in the same order.
`gallery_agent_import_id`	string The uuid4 of a gallery agent import associated with this import

Responses

> **201** The job for the bulk import.

POST `/api/v1/gallery_items_bulk`

        "color": "string"
    }
}
```

Get all gallery tags.

QUERY PARAMETERS

`page_token`	string Token that represents which page you are currently on. None = 1st page. Each page will return a new token, used for retrieving the next page.
`max_page_size`	integer `>= 0` Default: `10` How many items to page by. The server can choose to return less than this per page.
`sort_by`	string Default: `"ts"` What field to sort by (defaults to 'ts' (timestamp)).
`sort_order`	string Default: `"descending"` Enum: `"ascending"` `"descending"` How to sort ("ascending" or "descending").

Responses

> **200** A paged list of gallery tags.

---

company_jobs

Export an organization's data.

Hitting this endpoint multiple times will create multiple requests to export.

REQUEST BODY SCHEMA: application/json

`organization_id` required	string UUID of orgnization to create export for
`immediate`	boolean

Responses

— **400** Malformed request, most likely a validation error.

— **401** The requester doesn't have permission to perform this action.

— **403** The request is unauthenticated.

— **404** The specified resource doesn't exist.

— **500** The server encountered an unexpected condition that prevented it from fulfilling the request.

POST `/api/v1/organization_exports`

Copy

```
{
    "organization_id": "UUID",
    "immediate": true
}
```

users

Get all users.

Scoped in various ways (see parameters below).

QUERY PARAMETERS

`organization_id`	string <uuidv4> The organization id for the organization that owns the requested resources. This should almost always be the calling user's organization
`user_group_id`	string <uuidv4> The id of the user group whose members own the requested resources. If this is present, only items owned by members of the specified user group will be returned.
`search`	string A search param, which searches user name and emails
`format`	string Value: `"csv"` May be set to "csv" in order to generate a csv file containing a user report.
`company_type`	string The company type. This is only used when format=csv.
`state`	string The state that the user's company is in. This is only used when format=csv.
`active`	boolean If true, return only active (ie. unsuspended) users

`gallery_coalition_contact`	boolean If true, only find users who are marked as gallery_coalition_contact
`page_token`	string Token that represents which page you are currently on. None = 1st page. Each page will return a new token, used for retrieving the next page.
`max_page_size`	integer `>= 0` Default: `10` How many items to page by. The server can choose to return less than this per page.
`sort_by`	string Default: `"ts"` What field to sort by (defaults to 'ts' (timestamp)).
`sort_order`	string Default: `"descending"` Enum: `"ascending"` `"descending"` How to sort ("ascending" or "descending").

Update a user by id.

PATH PARAMETERS

`user_id` required	string <user_uuidv4> The user uuid.v4 id, or the string 'me'

REQUEST BODY SCHEMA: application/json

`name`	string Full name
`title`	string The occupation of the user
`phone_number`	string or null E164 phone number (See https://en.wikipedia.org/wiki/E.164)
`company_id`	string <uuidv4> New organization for user
`preferred_2fa_method`	string Enum: `"email"` `"sms"` `"totp"` Indicates how the user would like to receive 2FA confirmation messages
`current_password`	string Password
`new_password`	string Password
`new_password_confirm`	string Password (confirmed)
`role_type`	integer Enum: `0` `1` `4` `5` Sets the user's role using an allowed integer.
`suspended`	number Sets the suspended status on the user account.

`enabled_features` >	Array of objects Sets the features which are currently allowed to the user
`set_feature_override` >	object Sets the feature_overrides object that allows saving a Feature Hierarchy Node
`popup_actions` >	Array of objects Sets popup actions which have been completed (accepting TOS, etc.)
`banner_text`	string or null Sets unique banner text for this user in the application
`gallery_coalition_contact`	boolean or null Assigns the user as a gallery coalition contact who will be notified for information requests.
`totp_code`	string TOTP code, used to edit preferred_2fa_method to turn TOTP on or off
`disabled_app_notifications`	Array of strings App Notifications that should be disabled
`disabled_email_notifications`	Array of strings Email Notifications that should be disabled
